

Win at Tassomai

A **very** quick
implementation
guide

As a **Leader** (SLT, RSL, DHT, HoD, etc)

Consistently enforce these **two** rules:

1. All students must complete their weekly goal **each week** in **each subject**. [*The Tassomai week = Monday to Sunday*].

*This is a minimum expectation;
failure to do so results in a sanction.*

2. All staff should **log in to Tassomai every day**, and at least once per week for each class they teach, to support with **quality of engagement** (*see Teacher slide*).

How do you know if it's happening?

Student homework completion is reported in your **Tassomai dashboard**. It is also reported in the various live spreadsheets we produce for you including your SLT Dashboard.

*We offer round-the-clock **support and training** if you need help getting to grips with the various tooling we offer; we can also modify these sheets to **make custom reports for you** - all part of the service.*

Teacher engagement is broadly reported in your SLT Dashboard too as a "Days Active per Teacher" and "Class Tasks per Teacher" stat for each department.

Both of these statistics contribute heavily to the school's engagement ranking, so you should see this climb!

As a **Teacher** in the classroom...

Log into Tassomai every (school) day.

Check in on each class through the week and support quality of engagement:

- **Weekly goals** should be done across several days, not all at once;
- **Accuracy** should be over 60% and aiming for 70%+;
- Set one **Class Task** for each class each week;
- Run a **Lesson Starter*** at least once per week

**Lesson Starters: coming soon*

Why should this quality of engagement matter to teachers?

- **Spreading weekly goals** across four daily goals optimises the learning process (spacing and interleaving). Students' learning and recall ability will be far more robust this way.
- **Minimising unnecessary errors** means that the quizzing algorithm will better identify and adjust to genuine knowledge gaps; intervention data (the dots and trees) will likewise be more accurate and informative.
- **Class Tasks & Lesson Starters** allow you to set a focus exercise in a particular topic of your choosing and see instantly how much students improve. That learning is then blended into ongoing quiz practice for reinforcement.
- If **every** teacher **continually** drives these messages, the resulting **consistency** in engagement, improvement in **student attainment** and **intervention data** will mean considerably **reduced workload** for all.

Why should this quality of engagement matter to **pupils**?

- **Spreading weekly goals** across four daily goals means students win discounts and headstarts - it means **25% less work overall** than doing it all at once... and it becomes far easier to learn from mistakes and improve.
- **Hitting the accuracy target** on each quiz (rather than just missing it) **halves the time taken** to complete a daily goal. Less haste = more speed!
- *Following these two rules means **knowledge sticks faster** and is **retained better** through continuous marginal gains. The tree will grow more healthily and students will more rapidly **develop metacognition** and gain in self-confidence.*

**Students will not figure this out on their own.
You **all** have to tell them **repeatedly!****

What to tell pupils about **Accuracy!** when they ask...

"How can I get 60%+ if I don't know the answers Sir/Miss?"

The accuracy bonus targets and the **quizzes' difficulty levels** are set within reach for you (based on your previous accuracy in the topic).

Every question is repeated for correction and confirmation. Pay attention to feedback as you answer, and use Tassomai daily (rather than once per week). You'll quickly learn the right answers!

Check your tree before quizzes and inspect your red and orange leaves for the topic you're about to practise. It takes an extra minute but you get that time back daily goal points.

Use Mai if you're stuck on a question (or if you don't understand why you got one wrong) so you are more likely to remember for next time.

DON'T RUSH! Make your best guess - the extra few seconds you take will be easily gained back by scoring a few extra points each quiz.

Do this, and...

Win at Tassomai

...which means

- *leaping up the national rankings,*
 - *better homework,*
 - *reduced teacher workload,*
 - *targeted intervention,*
and most importantly...
 - *vastly **improved student outcomes!***
-
